Instructions to Authors

First author

Second author

Third author

Abstract

[illegible]

1 The Title

The title of the article is defined in the usual way, with `\title`. For the authors and their affiliations, three cases are distinguished:

- One author: define the author with `\author`.
- Multiple authors: define the authors with `\author`, separated by `\and`.

2 The abstract

Put the abstract before the first section with the **abstract** environment.

3 Sections and paragraphs

Use the usual `\section`, `\subsection`, and `\subsubsection` command for formatting section heads.

Do not leave extra space between paragraphs.

Please, do not include a list of contents!

3.1 A Subsection Heading

3.1.1 A Subsubsection Heading

4 Making References

Make references in the running text with the `\cite` command [2]. Multiple references go like this [1, 3].
